WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

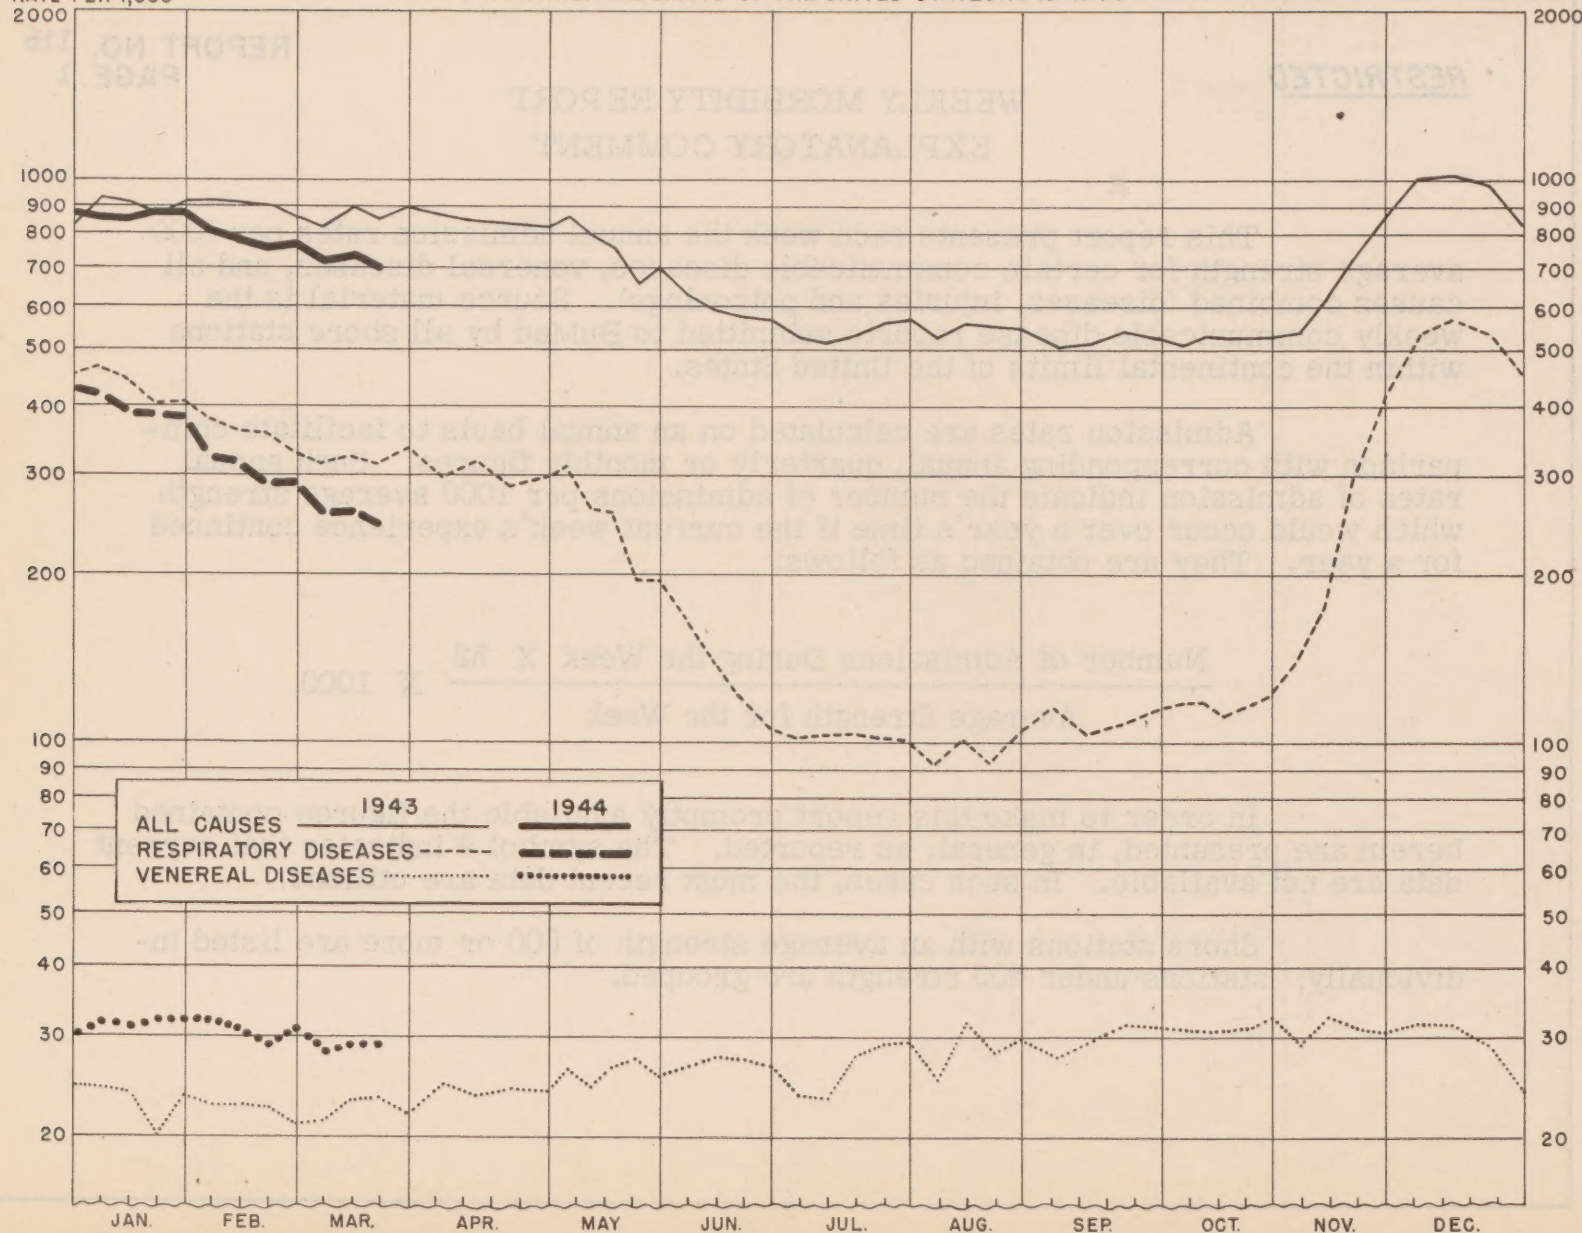

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

CURRENT TRENDS

Week Ending 18 Mar 1944

After the slight rise of last week, the curve for Admissions All Causes resumes a downward trend.

The trend of the respiratory-disease curve after the very slight rise of the previous week, continues downward.

The venereal-disease rate is reported again at 29, which is well above the rate reported for the corresponding week of 1943 but below the peak rates reported during 12 weeks of 1943.

Influenza and Catarrhal Fever. For the 14th consecutive week since the winter's peak rate was reached (week ending 11 Dec 1943) the rate for these infections has continued to decline until it now stands at less than one-third that reported for the peak week and much below the rate reported for the corresponding weeks of both 1942 and 1943. The highest rates were reported for the 9th and 3rd Districts, the lowest rate by the 7th District. The rates for all Districts except the 3rd either remained level or decreased; this marks the 2nd consecutive week during which the rate for the 3rd District has risen.

Pneumonia--Broncho and Lobar. The general trend downward of the pneumonia curve was interrupted this week by a slight rise, returning the curve to the level of the last two weeks of February. The 13th District reported a rate more than 2 times that of the next highest District, the 4th. The lowest rate was reported in the 7th District.

Pneumonia, Atypical. The rate for this infection continued for another week at 3. This is above the rate for the corresponding week of 1943 but less than half the peak rate of the week ending 11 Dec 1943. The highest rate is again reported for the 11th District. The 7th District reports no cases.

Rheumatic Fever, Acute. For another week the rate for this infection remained at 4.

PAGE 4

CURRENT TRENDS--CONTD.

The highest rates are reported for the 9th and 13th Districts while the 4th District and Potomac and Severn River Commands reported no cases.

Scarlet Fever. The rate for scarlet fever stands for another week at 11. This appears to represent a temporary halt in a generally downward curve but the curve for the year thus far stands considerably above the curve for both 1942 and 1943 for the corresponding period. The highest rate is reported for the 9th District, the lowest for the 7th. The trend is upward in five Districts, downward in six.

Cerebrospinal Fever, Meningococcic. The incidence of this disease has been consistently below that experienced in the corresponding weeks of 1943 and this week sees the rate at the lowest level reported since the 3rd week in September, 1943. Seven of the Districts and the Potomac and Severn River Commands reported no cases.

Malaria. Again for the 6th week the rate for malaria remains around 3. The curve stands well above the curves for comparable periods of both 1942 and 1943. The 4th, 11th, and 12th Districts report the highest rate; no cases were reported in the 6th District.

Measles. The measles curve having reached its seasonal peak in the week ending 29 Jan is apparently starting a downward trend in line with but somewhat below the curves of 1942 and 1943. The 13th District reports the highest rate and the Potomac and Severn River Commands the lowest rate.
